

Your Challenge:

Invisible AI

Build products where AI is integrated naturally into what the user is already doing, rather than existing mainly as something they have to prompt or talk to.

Think beyond the chatbot, but for inspiration/ a starting point consider Granola, Wispr Flow, Doomersion, and Tornvol.

Info available on Devpost

Hackathon Rules & Submissions

Info available on Devpost

You must submit a 3 minute recording which contains both a demo and a presentation of your projects.

You must also submit a Github link for your project. Tip: Aim to have your video done by 3:35, and don't work on presentation at the last minute.

Submissions must be in by **3:45pm**.

No working on previous projects. Any frameworks must be credited clearly in your README.md file.

Teams can be up to 4 people.

You must be present at judging. Top placing teams will present their project to everyone. So make sure you have worked on your presentations!!!

Example websites to host your video submissions: <https://streamable.com>, <https://youtube.com>

Rules for the day

Due to the Open day that is happening, our room size has been cut in half.

To compensate for that, we have booked the ITL 3rd and 4th floor.

Make use of those floors as much as possible, as they are the **newest spaces on campus, and the best places** to work with your team and Hack for the day.

For any of the freshers who do not know where it is located, do not worry, we will have some committee guide you to the spaces

This room has also been allocated to us so feel free to use this as well.

Keep the corridors and buildings **clear** bar the allocated rooms.
